

Ustka dn. 28.06.2007r.

References

I am glad to inform that the company, **Nowatel Sp.z o.o.**, located at the address Rumia ul. Gdańska 39/27 POLAND provided, installed and activated the GMDSS Simulator System in the Navy Training Centre, which is situated in Ustka on December 2006. The **GMDSS Vox Maris** simulator software was written by **Advenio**.

This simulator should be used to train professional seamen and petty officers of the Polish Navy. The course in operating the GMDSS system ends with a Certificate in the GMDSS Operator.

The GMDSS simulator is to simulate the use of the GMDSS equipment, displayed on a screen and to emulate real conditions, displayed by a multimedia slide projector. It also allows to discuss a scenario of each simulation.

The GMDSS Simulator Vox Maris is based on TCP/IP technology, which allows to transmit a voice as well as different data via a LAN network. Both the Instructor and the Student are able to communicate by using a microphone and headphones in such a way which faithfully transmits acoustic parameters of real radio receivers and makes the quality of acoustics depend on a destination between radio receivers.

The GMDSS laboratory consists of:

1. The GMDSS System Vox Maris software for the instructor's workstation and for students' six training workstations
2. The GMDSS extra equipment- the EPIRM radio beacon, the Navtex receiver and the VHF radio receiver from DSC
3. The Lan network equipment and a multimedia slide projector

The company, **Nowatel Sp. z o.o.** carried out the task professionally and carefully. They provided the system, which offers modern and infallible technology.

This reference is written on request of the provider of the GMDSS system, **Nowatel Sp. z o.o.**
